TITLE : MAGNETIC RECORDING MEDIUM

ABSTRACT : PURPOSE: To obtain a magnetic recording medium with superior durability and corrosion resistance by forming a protective layer of a specified phosphoric ester contg. fluorine on the surface of a magnetic layer contg. a metallic magnetic material as a recording element.

CONSTITUTION: A magnetic recording medium is obtd. by forming a protective layer of a phosphoric ester contg. fluorine represented by formula 1 or 2 (where n is about 4~30, R₁ is about 1~5C alkyl, and R₂ is about 1~5C alkylene) on the surface of a magnetic layer contg. a metallic magnetic material as a recording element. The amount of the phosphoric ester used is 0.01~30mg/m². Since a phosphoric acid group at a terminal of the molecule of the phosphoric ester is firmly adsorbed on the surface of the magnetic layer, a uniform mono-moleccular film is formed, so the durability and corrosion resistance of the magnetic recording medium can be highly improved.
